Experience

Software Engineer Aug. 2025 – Present
RipeSeed *Lahore, Pakistan*

- Ship client web products end to end using TypeScript, Next.js, and React on the frontend, with Node.js and PostgreSQL on the backend, covering API design, background jobs, integrations, and production UI.
- Work directly with clients and a small product team to scope features, split ownership, and deliver production releases. Selected work is highlighted below.

Associate Software Engineer Mar. 2025 – Aug. 2025
Sixlogics *On-site*

- Started as an intern and transitioned into a full-time Associate Software Engineer role, contributing to existing production web applications.
- Built and maintained features using PHP and Laravel on the backend and React on the frontend, integrating REST APIs and working within an established production codebase.

Projects

ClarityHero | *Next.js, TypeScript, Node.js, PostgreSQL, Inngest, LLM APIs* RipeSeed · 2026

- Decision-intelligence product that connects read-only to a founder's email, chat, CRM, and accounting data and returns a short, ranked daily briefing instead of a dashboard.
- Built the AI pipeline that distills raw messages and records into ranked decisions and risks, orchestrating multi-step LLM jobs with Inngest for scheduled runs and durable retries.
- Implemented the Gmail and Outlook integrations end to end: OAuth consent, token refresh, and incremental read-only sync of recent mail.
- Built the Next.js frontend and the delivery layer that ships each briefing in-app, by email, and to Slack.

Dialpad–Quickbase Integration | *TypeScript, Node.js, REST APIs, webhooks* RipeSeed · 2026

- Synced call and contact activity from Dialpad into Quickbase records through webhooks and REST APIs, removing manual data entry from the client's daily workflow.
- Handled field mapping between the two data models plus retries and error handling on failed webhook deliveries.

Roofing Operations Platform | *Next.js, TypeScript, Django REST Framework* RipeSeed · 2026

- Own the Next.js frontend of a roofing-industry platform backed by a Django REST API.
- Built the lead management feature end to end — capture, filterable listing, detail view, and status updates — against the Django API with typed clients and reusable components.

Hirrd — Job Portal | *React, Tailwind CSS, shadcn/ui, Supabase, Clerk* 2025

- Full-stack job portal with separate candidate and recruiter roles, covering onboarding, job posting, applications, and saved jobs.
- Implemented authentication and role-based access with Clerk, modelled jobs and applications in Supabase, and added search and filtering by role, company, and location.

Education

National University of Computer and Emerging Sciences (FAST) Lahore, Pakistan
Bachelor of Science in Computer Science *Sep. 2021 – May 2025*

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Python, SQL, HTML/CSS, C/C++
Frontend: React, Next.js (App Router), Tailwind CSS, shadcn/ui, React Hook Form, Zod
Backend: Node.js, Express, Django REST Framework, REST APIs, webhooks, third-party integrations
Databases: PostgreSQL, MongoDB (Mongoose), Supabase, Prisma
AI & workflows: LLM API integration, prompt design, Inngest (durable background jobs), OAuth 2.0
Tools: Git, GitHub, Docker, Postman, Vercel, Jira, VS Code
